

THEMBELI HLE HAZEL NCUBE

JUNIOR SOFTWARE DEVELOPER

An enthusiastic and driven student software developer working across frontend and backend technologies. Skilled in creating user-friendly interfaces in Figma, building responsive web applications with React.js, and implementing server-side logic. A fast learner and collaborative problem-solver eager to bring a comprehensive approach to web development in an entry-level role.

PROJECTS

AquaRho-Water Supply and Delivery App

A dual-sided digital marketplace and logistics application designed to connect urban consumers with vetted bulk water vendors to resolve regional utility supply challenges.

Software Student Dashboard

Designed and developed a responsive, client-side student dashboard designed to centralize academic tracking and daily productivity. I built it entirely using core web technologies: HTML5, external CSS, and JavaScript. The project demonstrates strong foundational frontend skills, featuring a responsive grid layout, an interactive side-drawer menu, and dynamic DOM manipulation that allows users to interact with dashboard elements in real time, all while maintaining strict file organization and clean, decoupled code.
